01

**React**

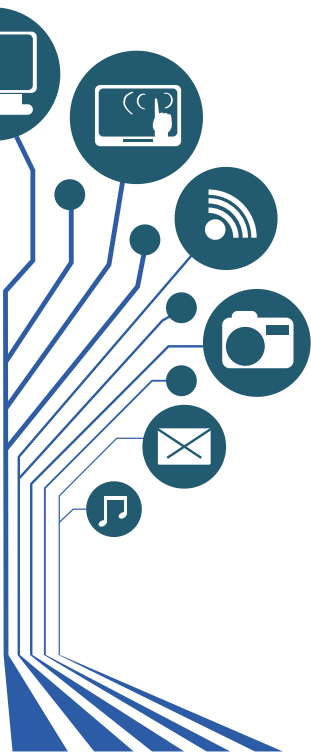

It is easier to grasp compared Angular. However, it is difficult to learn when augmented with Redux.

---

Learning Angular is not easy for beginners. Thus, it requires lots of training.

**Angular**

Fathima Samila  
@samila99

02

**React**

Reactjs is preferred when the dynamic content needed is intensive.

---

Angular is platform-independent or hence is compatible to work in any platform.

**Angular**

Fathima Samila  
@samila99

03

**React**

Data binding is one-way type.

---

Data binding is two-way types.

**Angular**

Fathima Samila  
@samila99

04

**React**

Reactjs Does not use the  
Dependency Injection concept.

---

Angular Hierarchical Dependency  
Injection system used.

**Angular**

Fathima Samila  
@samila99

05

**React**

Features of ReactJS is Code reusability.  
Rich JavaScript library, b, One-way  
data- binding.

---

Features of Angular is Testing.  
Templates, Accessibility, Low-  
code framework.

**Angular**

Fathima Samila  
@samila99

06

**React**

Companies using React: Instagram, Yahoo, Netflix, Asana, Facebook, Dropbox, Slack, Uber Technologies, Intercom, Airbnb, etc.

---

07

React is a JS library developed by Facebook which allows you to build UI components. It facilitates the creation of interactive User Interfaces.

---

Angular is a structural framework for developing dynamic web apps. It allows developers to use HTML as a template language and allows HTML's syntax to express the application's components briefly and clearly.
